WEB APPLICATION FOR PAYMENT

/ Contemporary and future-oriented

Worldwide, we spend a couple hours a day on our mobile devices. We can safely say that the use of smartphones is more than ingrained in our daily lives. Not only recreational internet use of the smartphone is on the rise, but especially practical matters such as payments are increasingly handled by mobile phone.

A pleasant parking experience is rounded off with a convenient payment process. Offer your customers a wide range of options - including online. Especially in facilities in a ticketless operation and without a barrier, it can sometimes happen that payment is forgotten unintentionally. With the entervo smart web pay web application, you can enable short-term parkers to pay online and conveniently settle the additional payment hours after exiting the car park. Enforcement management can thus be reduced.

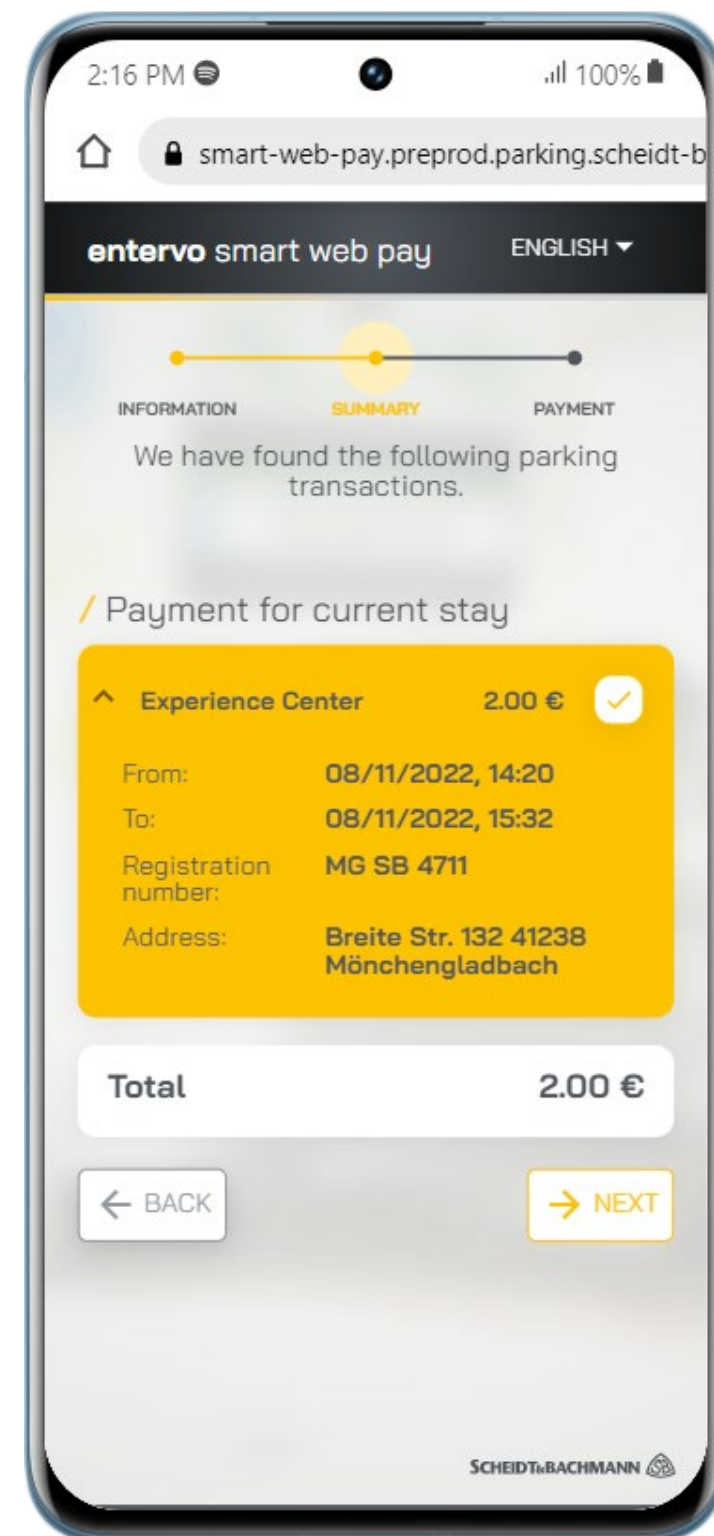

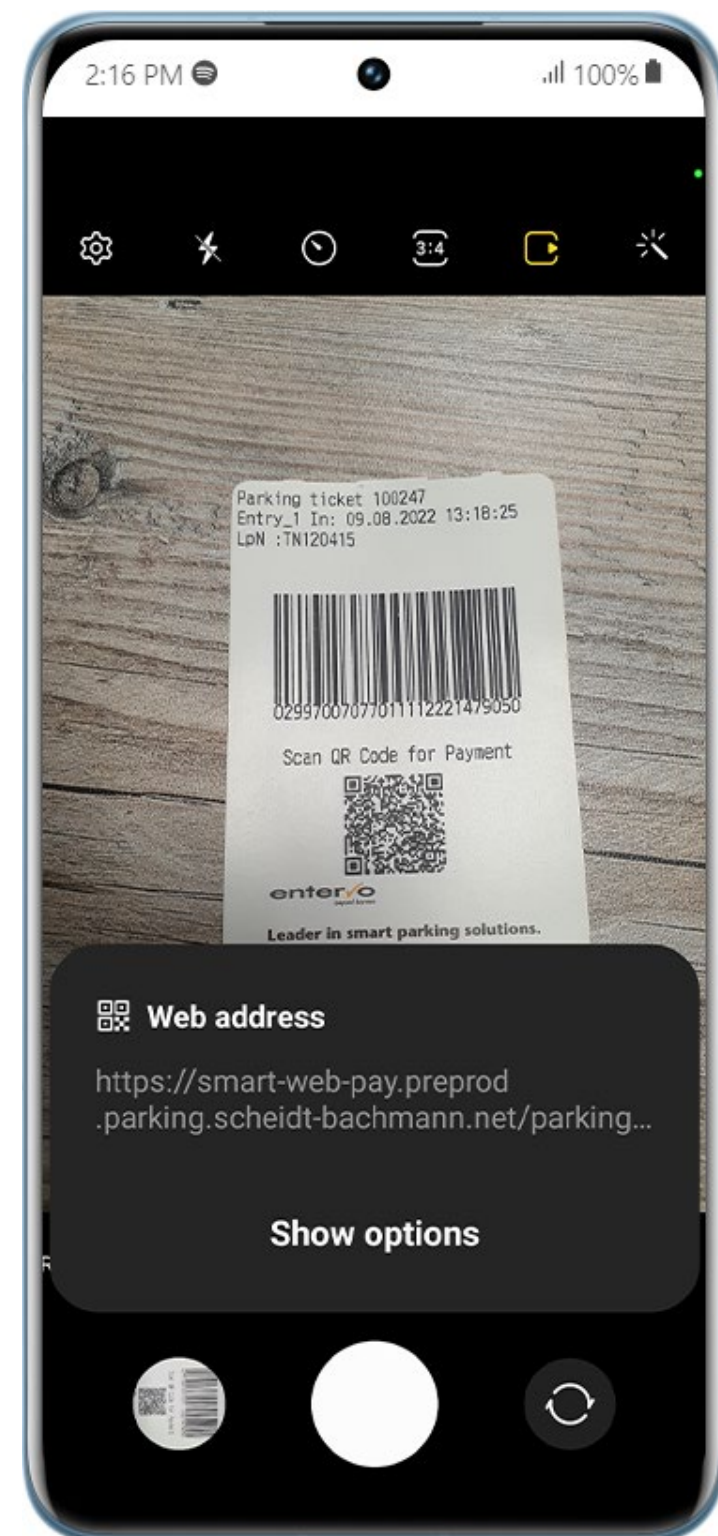

/ Expand the range of variants

EASY CONNECTION FAST USE

The entervo smart web pay web application is provided in responsive design and can be used via smartphone, tablet, laptop and screen. Online payments are made via the secure Scheidt & Bachmann Payment Gateway Service.

As the provider, you don't need to install additional hardware to implement this service. When your facility is running the latest version of entervo - as a Barcode system or (hybrid)ticketless system with cameras for license plate recognition your system upgrade is just a few clicks away.

/ Easy use with a ticket DYNAMIC QR CODE ON A TICKET

Offer your customers convenient access to the entervo smart web pay web application: A dynamic QR code is printed on the barcode ticket issued upon entry.

You do not require your visitor to download an app, but simply let them scan a QR code with their smartphone. The visitor is directed to a secure payment page and then completes his/her parking transaction online and immediately receives his digital receipt.

/ Easy use without a ticket

QR CODE USE IN TICKETLESS SYSTEMS

Even in a facility with a ticketless or hybrid system, there are a variety of variants to give your customers easy access to payment with entervo smart web pay. Predesigned QR codes that forwards directly to the corresponding web pay environment can be placed on a pay stations or on the customer display entervo.sign. entervo smart web pay can also be linked directly to your company website and used conveniently right here. The predesigned QR code can be used via familiar marketing tools such as centralized signs, displays, and e-mail campaigns to draw attention to the entervo smart web pay application and make it easy to use. The license plate number is entered into the web application as the identification medium.

YOUR BENEFITS AT A GLANCE

FLEXIBLE APPLICABLE

The web application for easy payment is possible in systems with barcode tickets as well as ticketless or hybrid systems.

TIME-INDEPENDENT

The web-based payment for the parking fee is made before driving out. In free flow operation it can be made subsequently within a time limit.

EFFICIENT

No investment in additional hardware is required for this payment option. No additional app installation is needed for your customer.

REDUCED ENFORCEMENT MANAGEMENT

The possibility of location-independent, subsequent payment reduces enforcement management for you as the operator in case of barrierless installation.

COST-REDUCING

Reduced paper consumption and reduction of maintenance cost of your current payment equipment.

INCREASE IN CUSTOMER SATISFACTION

Offer your customers a high level of customer convenience and a contemporary payment option online. (pay-as-you-go service)
